

270 compliance map changes:

Map no longer gives Error 2360 2100C INS segment is invalid when 2100C NM103, NM104, NM109, or DMG02 are present and INS 2360 2100D INS segment is invalid when 2100C NM109, 2100D NM103, NM104, or DMG02 are present

Map now fails when NOT USED segments have data.

Map now fails when the III segment is exceeds it maximum usage

Map now fails when the zip code is not 5 or 9 numeric characters

Map now fails for characters that are not in the basic or extended character set

271 compliance map changes:

Map now will not fail when CT is used in REF01 page 183

Map now fails when NOT USED segments have data.

Map now fails for characters that are not in the basic or extended character set

Map now fails when the zip code is not 5 or 9 numeric characters

Map now fails when HSD06 or INS17 exceed their length

Map now correctly fails for Only 1 allowed, II01=BK

276 compliance map changes:

Map now fails when NOT USED segments have data.

Map now fails for characters that are not in the basic or extended character set

Map now fails when the 2210E SVC is used and the 2210E DTP is missing

277 compliance map changes:

The value of 1S is not added to the xref pg 222 IG

Map now fails when NOT USED segments have data.

Map now fails for characters that are not in the basic or extended character set

820 compliance map changes:

Map now fails properly for 2300B RMR04 must equal sum of RMR05 + ADX01s

Map now fails when NOT USED segments have data.

Map now fails for characters that are not in the basic or extended character set

Map no longer gives incorrect error for Segment DTM in loop 170 was Out-Of-Sequence

Map now fails correctly if the data is larger than the field

Map now fails when the zip code is not 5 or 9 numeric characters

834 Translation map changes:

Now populating the REF02, where REF01=1L with the same information that is in the REF02, where REF01=3H

834 compliance map changes:

Map now fails when NOT USED segments have data.

Map now fails for characters that are not in the basic or extended character set

Map now fails when the zip code is not 5 or 9 numeric characters

Map now fails when Data contains the value of 024 within the 2300-HD01, where the 2300-DTP01=349 is missing

835 compliance map changes:

Map now fails when NOT USED segments have data.

Map now fails for characters that are not in the basic or extended character set

Map now fails when the zip code is not 5 or 9 numeric characters

Map now correctly fails for 1000B N102 missing, where N103=FI. If, 1000B N103 is not equal to XX, 1000B N102 is required

Map now fails for 2100 NM1=IL invalid when CLP06 = MA, MB, or MC

Map now fails for CLP05 must be 0 when CLP02 = 22 (reversal), CLP02 is equal to 22, but the value in CAS01 is not CR

837D compliance map changes:

Map now fails when NOT USED segments have data.

Map now fails for characters that are not in the basic or extended character set

Map now fails when the zip code is not 5 or 9 numeric characters

Map now fails when the EIN is not 9 numeric characters or has a dash as the third character

Map now fails if there are spaces in the modifier fields

Map now correctly fails for 2400 SV305=R, 2400 DTP01=441 is required

Map now fails for 2330A NM102=1, 2320 DMG is required

Map now correctly fails for 2010AA & 2010AB NM108=XX relation to 2010AA, 2010AB-REF where REF01=EI, SY or TJ

Map no longer fails for CLM05-3 = 6, REF01=F8

Map now correctly fails for Loop 2430 was not used, and the DTP in L2330B was not found

Map now correctly fails if modifiers are not consecutive

Map now fails if SVD02 is not equal to SV302 and there is not a 2430 CAS segment present.

Map now fails for 2010BA REF=Y4 and 2010CA

837P compliance map changes:

Map now fails when NOT USED segments have data.

Map now fails for characters that are not in the basic or extended character set

Map now fails when the zip code is not 5 or 9 numeric characters

Map now fails when the EIN is not 9 numeric characters or has a dash as the third character

Map now fails if there are spaces in the modifier fields

Map now correctly fails if modifiers are not consecutive

Map now fails for Missing Required 2010BA-DMG

Map now fails for 2320-DMG missing, where 2330A-NM102=1

Map now fails for 2000B or 2000C - PAT09 relation with 2300-DTP01=484

Map now fails if SVD02 is not equal to SV102 and there is not a 2430 CAS segment present

Map now fails if the 2000B SBR09 equals MB (Medicare) the REF02=SY (SSN) is not allowed for the following loops: 2010AA, 2010AB, 2010BA, 2010CA, 2310A, 2310B, 2310C, 2310E, 2330A, 2330C, 2420A, 2420B 2420D, 2420E or 2420F

837I compliance map changes:

Map now fails when NOT USED segments have data.

Map now fails for characters that are not in the basic or extended character set

Map now fails when the zip code is not 5 or 9 numeric characters

Map now fails when the EIN is not 9 numeric characters or has a dash as the third character

Map now fails if there are spaces in the modifier fields

Map now correctly fails if modifiers are not consecutive

Map now fails for SBR02 is required if HL04=0

Map now fails for 2320-DMG missing, where 2330A-NM102=1

Map now fails correctly for SV206 is required if SV201 equals 100 or 0100

Map now fails for the 2330B N4 segment is present, the 2330B becomes required.

Map now fails for SBR09 = MA/MB and REF01 = SY
